Validation of Our Lived Experiences Through Field Experience

Karen Canales Salas, Little Village Environmental Justice Organization (LVEJO)

Shared Air/Shared Action, EPA funded

Partnership with:

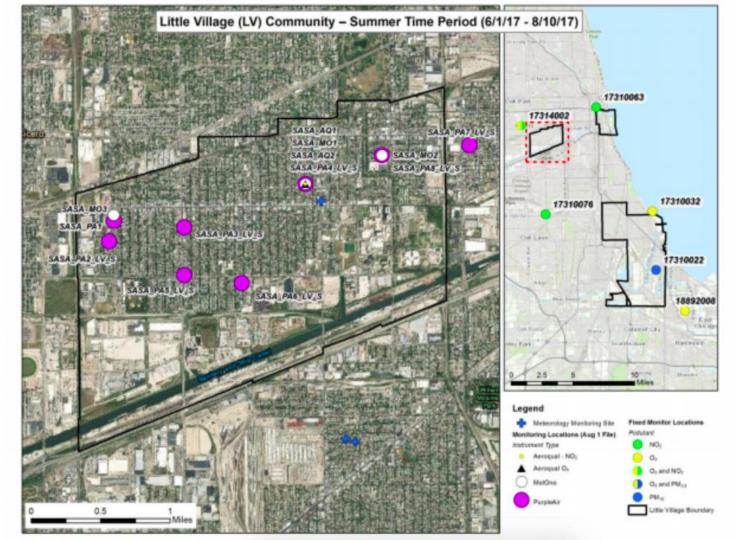

- 4 community organizations in Chicago, 3 EJ Orgs *
 - Little Village Environmental Justice Organization (LVEJO) *
 - People for Community Recovery (PCR)*
 - Southeast Environmental Task Force (SETF)*
 - Alliance for Greener South Loop (AGSL)
- 2 non-profits
 - Delta Institutes
 - Respiratory Health Association (RHA)
- 2 University Partners
 - University of Illinois at Chicago (UIC)
 - University of Memphis (UofM)

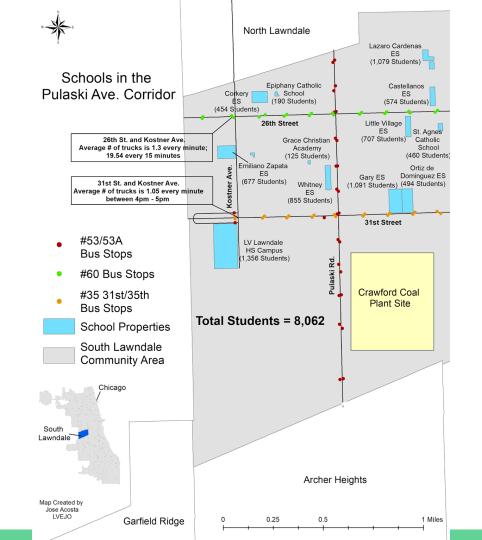

Shared Air/Shared Action

- LVEJO advocate for policy changes to the zoning ordinances and for green development
- PCR build awareness air quality and any potential threats
- SETF create awareness of local air quality threats and build connections with bordering neighborhoods
- AGSL connect with other environmental organizations and learn about own air quality

The project

- As a community that is in one of Chicago's Industrial Corridors, we've had been negatively impacted by the industry and pollution.
- We fought to shut down the Fisk and Crawford generating stations in 2012.
 - Emissions from these plants were linked to 2800 asthma attacks/year, 550 emergency room visits/year, and 42 premature deaths/year.
- Give community residents the power to do science because they knew there was a problem with their air.
 - Using low-cost sensors that are user-friendly; Air Beams, PurpleAirs, Aeroquals, Terrier

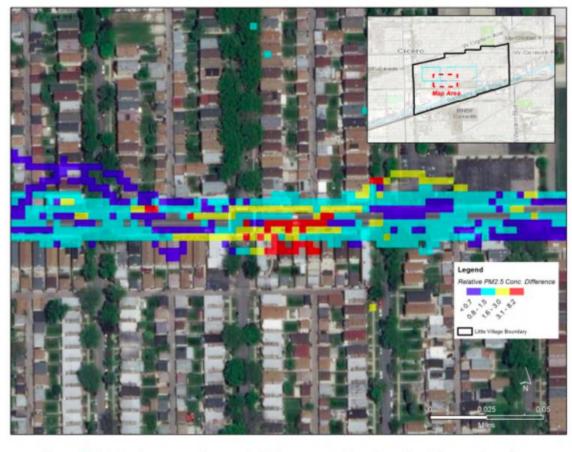

Figure 7. Relative increase or decrease in PM_{2.5} concentrations throughout the area based on the AirBeam data collected; dark and light blue areas indicate concentrations were typically at or below average, while the yellow and red areas indicate concentrations were typically above average. This figure highlights a hotspot area along W 31st St between S Avers Avenue and S Hamlin Avenue.

Sł

Empowerment Through Data and Experience

- We are now able to testify at hearings for proposed developments
- Continuing to demand healthier conditions and less air pollution because of the data
- Mobilize people to collect more data on air, traffic, and health
