What Is Bloomberg Mayors Challenge?

The Mayors Challenge is a competition that encourages mayors and their teams to come up with bold, new ideas that have the potential to solve urban problems and improve quality of life. The program has run contests across the United States, Europe, Latin America and the Caribbean.

It's an initiative to help city leaders think big, be bold, and uncover inventive – and ultimately, shareable – ideas that tackle today's toughest problems.

The Problem

Denver families spend an average of \$3,100 a year on asthma-related medical costs, resulting in more than \$30 million spent annually.

The Idea

The City of Denver will use cutting-edge air pollution sensor technology to create a city-wide air quality monitoring program at public school buildings, resulting in better informed policy decisions using environmental, health, and economic data.

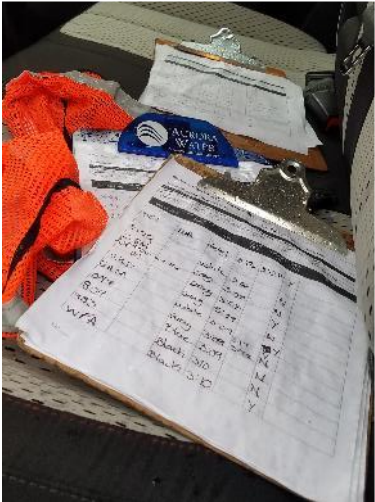

WHAT MAYOR MICHAEL B. HANCOCK IS SAYING:

"Without local air-quality data paired with increased awareness and advocacy, children and their families will continue to develop chronic lung disease, miss school and work, struggle with increased healthcare costs, and experience decreased income-earning and career opportunities."

— Michael B. Hancock, Mayor of Denver, CO

Test 1: Behavior Change (Anti-idling)

What we were testing...

The most effective method of influencing idling of vehicles

How we tested...

- Parent pledge sent home
- Anti-idling signage
- Active messaging* – text & Facebook

What we learned...

- Manual tracking is inefficient, unreliable, and unsustainable
- Schools do not have a standard or optimized pick-up/drop-off procedures

Test 2: Stakeholder Buy-in

What we were testing...

An effective method for gaining buy-in from school principals

How we tested...

- Co-creative development – talking with the principals about what they care about.
- Incorporating direct feedback on prototypes

What we learned...

- Principals do not have free time
- Communication must be short with big take-aways highlighted
- Include an easy to understand and follow, call to action

Did You Know?

- Denver has the 8th worst air quality among major cities (American Lung Association)
- Only 53% of residents realize and understand the health and environmental impacts
- 11.2% of children that attended a Denver public school in 2016 have asthma (9,892 students)
- Annual asthma-related healthcare costs are \$3,100 per child

Children have one chance to grow healthy lungs.

Air pollution harms everyone, but children are more susceptible to its acute and long term health effects, including decreased lung function, increased respiratory infections, and missed days of school. In fact, asthma is the leading cause of school absenteeism. While multiple factors influence a child's exposure to air pollution, schools are an ideal intervention point for education and empowerment.

What's Our Vision?

To empower people and communities to decrease the health and financial burden of air pollution for Denver's most vulnerable residents...children!

As one of 35 Champion City finalists, Denver's Department of Public Health & Environment (DDPHE) is using the awarded \$100,000 grant to develop and implement a real-time, hyper-local air quality monitoring system at 10 Denver Public Schools (DPS) that will empower communities, families and schools to protect children's respiratory health.

Using the rich social networks of schools, we will also co design and deliver air quality and respiratory health education, behavioral interventions, and school based community to empower people and communities.

What Can You Do?

- Be a force for change!
- Approve and support a pilot at your school
- Identify a school champion to partner with us to co-design programming to educate and influence positive behaviors

Test 3: Data Communication (Dashboard Development)

- Focus groups with nurses, teachers, and parents
- Collaborative element development

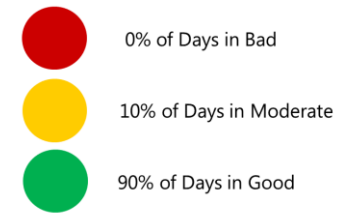

Community Dashboard

- Near real time data
- Customizable tiles
- Various action prompts

Air Quality During 2017/2018 School Year

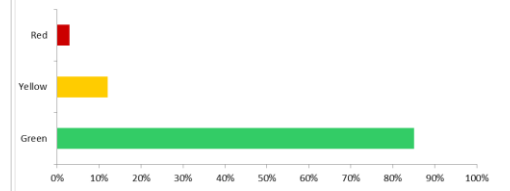

Think Globally: Tip of the Day

What Can I Do to Improve Air Quality?

Drive less! Instead, carpool, take the bus, ride your bike or walk.

Percentage of Green, Yellow, and Red Days During 2017/2018 School Year

ACTION

Air quality today is good!
Enjoy your time outside.

PM_{2.5} Level on this Date Last Year

Date: May 11th, 2017
PM_{2.5} Level: 30
Alert Level: Good

Air Quality Forecast

Today's Forecast

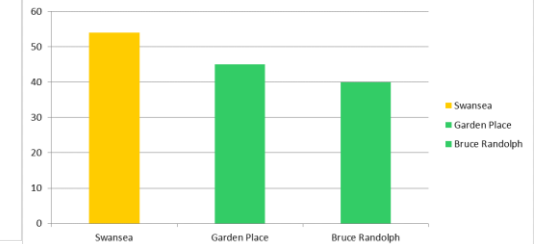

Good

Tomorrow's Forecast

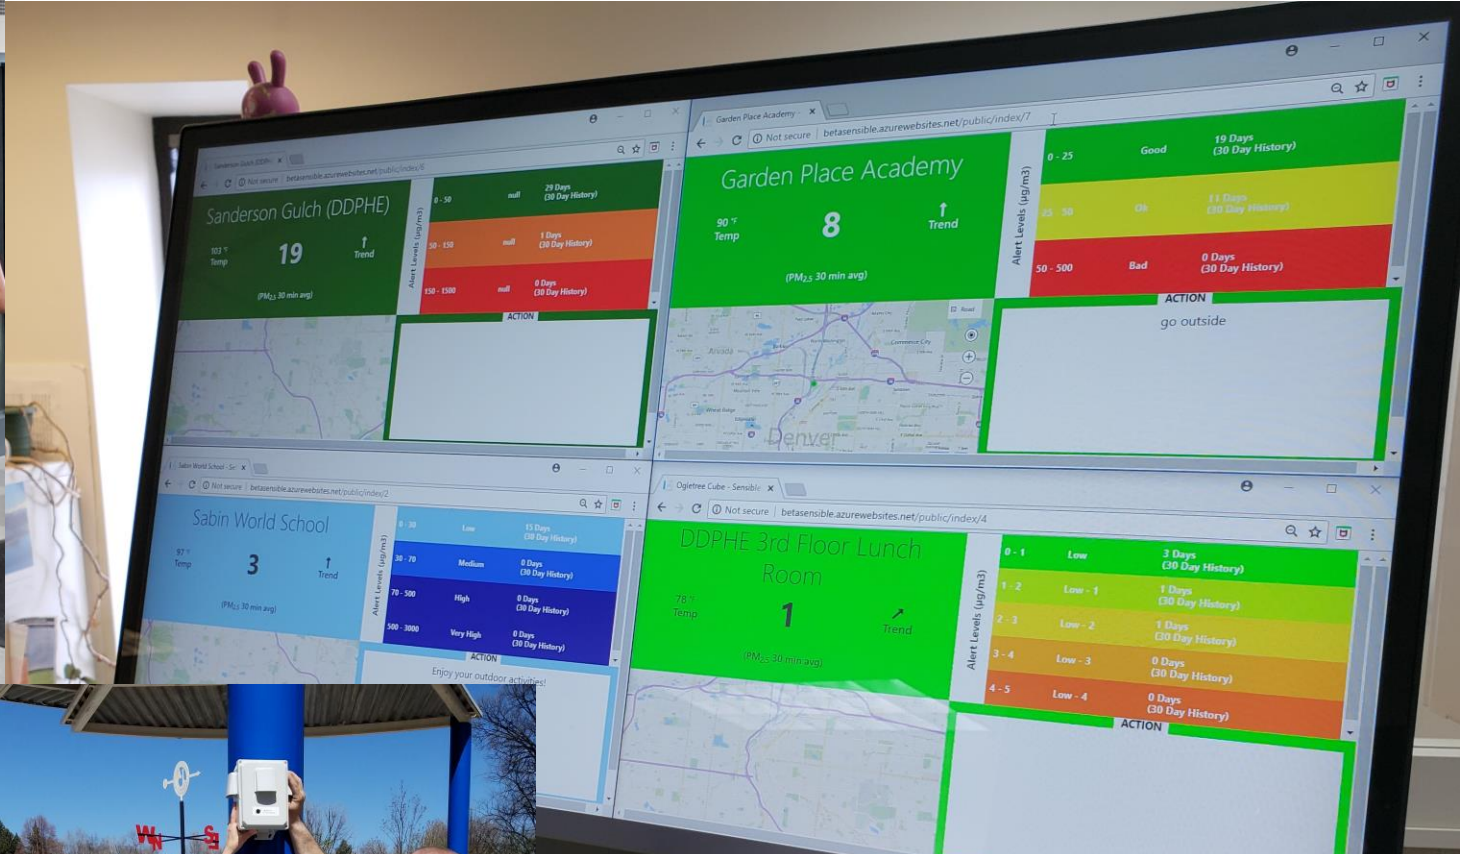

Moderate

PM_{2.5} Levels at Nearby Schools

Particulate Matter 2.5 is so small that it can go into our lungs and then into our blood. When it enters our blood it can travel to places in our body like our heart and brain and cause damage.

What's Next?!

Continue working with schools to identify air pollution patterns and put programs in place to reduce exposure and reduce local pollution sources

Continue refine the sensor technology and work with the data platform developer on ways to correct data utilizing regional reference instrumentation

Win the grand prize of \$5 million in October. Scale to encompass the schools within Denver that are most impacted by air pollution.

Thanks to Collaborators!
